

Nottinghamshire County Council Pension Fund Funding Strategy Statement

Introduction

This is the Funding Strategy Statement (FSS) for the Nottinghamshire County Council Pension Fund. It has been prepared in accordance with Regulation 58 of the Local Government Pension Scheme Regulations 2013 (“the Regulations”) and describes Nottinghamshire County Council’s strategy, in its capacity as Administering Authority, for the funding of the Nottinghamshire County Council Pension Fund (“the Fund”).

This statement has regard to the guidance set out in the document “Preparing and Maintaining a Funding Strategy Statement” published by CIPFA in February 2016. The statement also has regard to the Investment Strategy Statement published by the Administering Authority.

The Statement describes a single strategy for the Fund as a whole. The Fund Actuary, Barnett Waddingham LLP, has been consulted on the contents of this Statement.

Purpose of the Funding Strategy Statement

The purpose of this Funding Strategy Statement is to explain the funding objectives of the Fund and in particular:

- Establish a clear and transparent fund-specific strategy that will identify how employers’ pension liabilities are best met going forward;
- Support the desirability of maintaining as nearly constant a primary contribution rate as possible, as defined in Regulation 62(6) of the Regulations;
- Ensure that the regulatory requirements to set contributions to meet the future liability to provide Scheme member benefits in a way that ensures the solvency and long-term cost efficiency of the Fund are met; and
- Take a prudent longer-term view of funding those liabilities.

Aims and purpose of the Fund

The aims of the Fund are to:

- Manage employers’ liabilities effectively and ensure that sufficient resources are available to meet all liabilities as they fall due
- Achieve and maintain Fund solvency and long-term cost efficiency at reasonable cost to taxpayers, scheduled, resolution and admitted bodies, and enable contribution rates to be kept as nearly constant as possible where practical; and
- Seek returns on investment within reasonable risk parameters

The purpose of the Fund is to:

- Pay pensions, lump sums and other benefits provided under the Regulations
- Meet the costs associated in administering the Fund
- Receive contributions, transfer values and investment income.

Funding objectives

Contributions are paid to the Fund by Scheme members and the employing bodies to provide for the benefits which will become payable to Scheme members when they fall due.

The funding objectives are to:

- Ensure that pension benefits can be met as and when they fall due over the lifetime of the Fund;
- Ensure the long-term solvency of the Fund;
- Set levels of employer contribution rates to target a 100% funding level over an appropriate time period and using appropriate actuarial assumptions, while taking into account the different characteristics of participating employers;
- Build up the required assets in such a way that employer contribution rates are kept as stable as possible, with consideration of the long-term cost efficiency objective; and
- Adopt appropriate measures/approaches to reduce the risk, as far as possible, to the Fund, other employers and ultimately the taxpayer from an employer defaulting on its pension obligations

In developing the funding strategy, the administering authority should also have regard to the likely outcomes of the review carried out under Section 13(4)(c) of the Public Service Pensions Act 2013. Section 13(4)(c) requires an independent review of the actuarial valuations of the LGPS funds; this involves reporting on whether the rate of employer contributions set as part of the actuarial valuations are set at an appropriate level to ensure the solvency of the fund and the long-term cost efficiency of the scheme so far as relating to the pension fund. The review also looks at compliance and consistency of the actuarial valuations.

Key Parties

The key parties involved in the funding process and their responsibilities are as follows.

The Administering Authority

The Administering Authority for the Pension Fund is Nottinghamshire County Council. The main responsibilities of the Administering Authority are to:

- Operate the Fund in accordance with the LGPS Regulations
- Collect employee and employer contributions, investment income and other amounts due to the Fund as stipulated in the Regulations
- Invest the Fund's assets, while ensuring cash is available to meet liabilities as and when they fall due
- Pay the benefits due to Scheme members as stipulated in the Regulations
- Take measures to safeguard the Fund against the consequences of employer default
- Manage the actuarial valuation process in conjunction with the Fund Actuary, and enable the Local Pensions Board to review the valuation process as they see fit

- Prepare and maintain this FSS and the Investment Strategy Statement (ISS) after consultation with other interested parties as appropriate
- Monitor all aspects of the Fund's performance and funding
- Effectively manage any potential conflicts of interest arising from its dual role as both Administering Authority and Scheme employer; and
- Enable the Local Pension Board to review the valuation process as they see fit.

Scheme Employers

In addition to the Administering Authority, a number of other Scheme Employers, including Admission Bodies, participate in the Fund. The responsibilities of each Scheme Employer that participates in the Fund, including the Administering Authority, are to:

- Collect employee contributions and pay these together with their own employer contributions certified by the Fund Actuary to the Administering Authority within the statutory timescales, including any exit payments on ceasing participation in the Fund
- Notify the Administering Authority of any new Scheme members and any other membership changes promptly
- Develop a policy on certain discretions and exercise those discretions as permitted under the Regulations
- Meet the costs of any augmentations or other additional costs in accordance with agreed policies and procedures
- Notify the Administering Authority of significant changes in the employer's structure or membership;

Scheme members

Active Scheme members are required to make contributions into the Fund as set by Ministry for Housing, Communities and Local Government (MHCLG).

Fund Actuary

The Fund Actuary for the Pension Fund is Barnett Waddingham LLP. The main responsibilities of the Fund Actuary are to:

- Prepare valuations including the setting of employers' contribution rates at a level to ensure Fund solvency and long-term cost efficiency after agreeing assumptions with the administering authority and having regard to the FSS and the Regulations;
- Prepare advice and calculations in connection with bulk transfers and the funding aspects of individual benefit-related matters such as pension strain costs, ill health retirement costs, compensatory added years costs, etc;
- Provide advice and valuations on the exiting of employers from the Fund;
- Provide advice and valuations relating to new employers, including recommending the level of bonds or other forms of security required to protect the Fund against the financial effect of employer default;
- Assist the administering authority in assessing whether employer contributions need to be revised between valuations as permitted or required by the Regulations;

- Ensure that the administering authority is aware of any professional guidance or other professional requirements which may be of relevance to their role in advising the Fund; and
- Advise on other actuarial matters affecting the financial position of the Fund.

Solvency Issues, Target Funding Levels and Long-term Cost Efficiency

Funding Strategy

The factors affecting the Fund’s finances are constantly changing, so it is necessary for its financial position and the contributions payable to be reviewed from time to time by means of an actuarial valuation to check that the funding objectives are being met.

The actuarial valuation involves a projection of future cash flows to and from the Fund. The main purpose of the valuation is to determine the level of employers’ contributions that should be paid to ensure that the existing assets and future contributions will be sufficient to meet all future benefit payments from the Fund.

The most recent actuarial valuation of the Fund was carried out as at 31 March 2022. The results of the 2022 valuation are set out in the table below:

Surplus (Deficit)	£9m
Funding level	100%

On a whole Fund level, the primary rate required to cover the employer cost of future benefit accrual was 19.0% of payroll p.a.

Funding Method

The key objective in determining employer’s contribution rates is to establish a funding target and then set levels of employer contribution to meet that target over an agreed period.

The funding target is to have sufficient assets in the Fund to meet the accrued liabilities for each employer in the Fund. The funding target may, however, depend on certain employer circumstances and in particular, whether an employer is an “open” employer – one which allows new staff access to the Fund, or a “closed” employer which no longer permits new staff access to the Fund. The expected period of participation by an employer in the Fund may also affect the chosen funding target.

For open employers, the actuarial funding method that is adopted is known as the Projected Unit Funding Method which considers separately the benefits in respect of service completed before the valuation date (“past service”) and benefits in respect of service expected to be completed after the valuation date (“future service”). This approach focuses on:

- The past service funding level of the Fund. This is the ratio of accumulated assets to liabilities in respect of past service. It makes allowance for future increases to members’ pay for pensions in

payment. A funding level in excess of 100 per cent indicates a surplus of assets over liabilities; while a funding level of less than 100 per cent indicates a deficit

- The future service funding rate (also referred to as the primary rate as defined in Regulation 62(5) of the Regulations) is the level of contributions required from the individual employers which, in combination with employee contributions, is expected to support the cost of benefits accruing in future.

The key feature of this method is that, in assessing the future service cost, the contribution rate represents the cost of one year's benefit accrual.

The approach to the primary rate will depend on specific employer circumstances and in particular may depend on whether an employer is an "open" employer – one which allows new recruits access to the Fund, or a "closed" employer – one which no longer permits new staff access to the Fund. The expected period of participation by an employer in the Fund may also affect the total contribution rate.

For open employers, the actuarial funding method that is adopted is known as the Projected Unit Method. The key feature of this method is that, in assessing the future service cost, the primary rate represents the cost of one year's benefit accrual only.

For closed employers, the funding method adopted is known as the Attained Age Method. The key difference between this method and the Projected Unit Method is that the Attained Age Method assesses the average cost of the benefits that will accrue over the remaining expected working lifetime of active members.

The approach by employer may vary to reflect an employer's specific circumstance, however, in general the closed employers in the Fund are admission bodies who have joined the Fund as part of an outsourcing contract and therefore the Attained Age Method is used in setting their contributions. All other employers (for example councils, higher education bodies and academies) are generally open employers and therefore the Projected Unit Method is used. The administering authority holds details of the open or closed status of each employer.

The adjustment required to the primary rate to calculate an employer's total contribution rate is referred to as the secondary rate, as defined in Regulation 62(7). Further details of how the secondary rate is calculated for employers is given below in the paragraphs below.

Valuation Assumptions and Funding Model

The value of accrued or past service benefits (allowing for future salary and pension increases) are referred to as the past service liabilities, or simply the liabilities.

Using the valuation assumptions set out below, an estimate is made of the future cash flows which will be made to and from the Fund throughout the future lifetime of existing members. These projected cashflows are then discounted using the discount rate which is essentially a calculation of the amount of money which, if invested now, would be sufficient together with the income and growth in the accumulating assets to make these payments in future, using our assumption about investment returns.

This amount is called the present value (or, more simply, the value) of members' benefits. Separate calculations are made in respect of benefits arising in relation to membership before the valuation date (past service) and for membership after the valuation date (future service).

To produce the future cashflows and therefore an estimate of the value of the liabilities, the fund actuary needs to make assumptions about the factors affecting the Fund's future finances such as inflation, salary increases, investment returns, life expectancy and retirements.

The assumptions adopted at the valuation can therefore be considered as:

- The demographic assumptions which are essentially estimates of the likelihood of benefits and contributions being paid
- The financial assumptions which will determine the estimates of the amount of benefits and contributions payable and their current or present value. The base market statistics used for the financial assumptions are smoothed around the valuation date so that the market conditions used are the average of the daily observations over the three months before and the three months after the valuation date.

A summary of the key assumptions is included in the following table and can be found in the actuarial valuation report as at 31 March 2022. Further details regarding the derivation of these assumptions can be found in the Fund Actuary's initial results and assumptions advice to the Fund dated 25 October 2022

Assumption	Derivation	Value at 31 March 2022
Future Price Inflation (RPI)	Smoothed 20 year point on the Bank of England implied Retail Price Index inflation curve as at 31 March 2019 less 0.7% per annum to reflect the shape of the yield curve and inflation risk premium	3.2% p.a.
Future Price Inflation (CPI)	RPI less 0.35% per annum to reflect the differences in the indices	2.9% p.a.
Salary increases	Assumed to be in line with CPI plus 1.0% p.a.	3.9% p.a.
Discount rate	Based on the long-term investment strategy of the Fund, with deductions for expenses and prudence	4.7% p.a.
Post-retirement mortality	S3PA tables with a multiplier of 115% for males and 110% for females, projected into the future with the 2021 CMI Model with a long-term rate of improvement of 1.25% p.a. a smoothing parameter of 7 and a weighting of 5% on 2020 and 2021	n/a

Future price inflation

The base assumption in any valuation is the future level of price inflation over a period commensurate with the duration of the liabilities, as measured by the Retail Price Index (RPI). This is derived using the 20 year point on the Bank of England implied Retail Price Index (RPI) inflation curve, with consideration of the market conditions over the six months straddling the valuation date. The 20 year point on the curve is taken as 20 years is consistent with the average duration of an LGPS Fund. A deduction of 0.3% p.a. is applied to the yield at the 20 year point to reflect the shape of the yield curve. A further deduction of 0.4% p.a. is applied to reflect the view

that investors are willing to pay a premium for inflation-linked products in return for protection against unexpected inflation.

Future pension increases

Pension increases are linked to changes in the level of the Consumer Price Index (CPI). Inflation as measured by the CPI has historically been less than RPI due mainly to different calculation methods. However, RPI is due to be aligned with CPIH (CPI but with allowance for housing costs) from 2030.

Therefore, reflecting the anticipated amendment to RPI from 2030 and therefore the relative difference between RPI and CPI, a deduction of 0.35% p.a. is made to the RPI assumption to derive the CPI assumption.

Future pay increases

As some of the benefits are linked to pay levels at retirement, it is necessary to make an assumption as to future levels of pay increases. Historically, there has been a close link between price inflation and pay increases with pay increases exceeding price inflation in the longer term. The long-term pay increase assumption adopted as at 31 March 2022 was CPI plus 1.0% p.a. which includes allowance for promotional increases.

Future Investment Returns/Discount Rate

To determine the value of accrued liabilities and derive future contribution requirements it is necessary to discount future payments to and from the Fund to present day values. The discount rate that is adopted will depend on the funding target adopted for each employer.

The discount rate that is applied to all projected liabilities reflects a prudent estimate of the rate of investment return that is expected to be earned from the Fund's long-term investment strategy by considering average market yields in the six months straddling the valuation date. The discount rate so determined may be referred to as the "ongoing" discount rate.

For open employers, the discount rate that is applied to all projected liabilities reflects a prudent estimate of the rate of investment return that is expected to be earned from the underlying investment strategy by considering average market yields in the six months straddling the valuation date. The discount rate so determined may be referred to as the "ongoing" discount rate.

For closed employers, an adjustment may be made to the discount rate in relation to the remaining liabilities, once all active members are assumed to have retired if at that time (the projected "termination date"), the employer becomes an exiting employer under Regulation 64. The Fund Actuary may incorporate such an adjustment after consultation with the Administering Authority.

The adjustment to the discount rate for closed employers is to set a higher funding target at the projected termination date, so that there are sufficient assets to fund the remaining liabilities on a "minimum risk" rather than on an ongoing basis. The aim is to minimise the risk of deficits arising after the termination date.

Further details of the assumptions adopted are included in the Fund's 2022 valuation report.

Asset Valuation

For the purposes of the valuation, the asset value used is the market value of the accumulated Fund at the valuation date adjusted to reflect average market conditions during the six months straddling the valuation date. This is referred to as the smoothed asset value and is calculated as a consistent approach to the valuation of the liabilities.

The Fund's assets are allocated to employers at an individual level by allowing for actual Fund returns achieved on the assets and cashflows paid into and out of the Fund in respect of each employer (e.g. contributions received and benefits paid).

Demographic assumptions

The demographic assumptions incorporated into the valuation are based on Fund-specific experience and national statistics, adjusted as appropriate to reflect the individual circumstances of the Fund and/or individual employers.

Further details of the assumptions adopted are included in the Fund's 2022 valuation report.

McCloud/Sargeant judgements

When the Government reformed public service pension schemes in 2014 and 2015 they introduced protections for older members. In December 2018, the Court of Appeal ruled that younger members of the Judges' and Firefighters' Pension schemes have been discriminated against because the protections do not apply to them. The Government has confirmed that there will be changes to all main public sector schemes, including the LGPS, to remove this age discrimination. A consultation has been run in relation to the changes proposed for the LGPS and legislation is now being drafted to bring forward these changes. The Regulations were consulted on over the course of 2022 with revised Regulations effective from October 2023.

For the 2022 valuation, as required by the then Department for Levelling Up, Housing & Communities, in calculating the value of members' liabilities it was assumed that:

- The current underpin (which only applies to those members within 10 years of their NPA at 31 March 2012) will be revised and will apply to all members who were active in the Scheme on or before 31 March 2012 and who join the post 1 April 2014 scheme without a disqualifying service gap;
- The period of protection will apply from 1 April 2014 to 31 March 2022 but will cease when a member leaves active service or reaches their final salary scheme normal retirement age (whichever is sooner);
- Where a member remains in active service beyond 31 March 2022 the comparison of their benefits will be based on their final salary when they leave the LGPS or when they reach their final salary scheme normal retirement age (again whichever is sooner);
- Underpin protection will apply to qualifying members who leave active membership of the LGPS with an immediate or deferred entitlement to a pension; and
- The underpin will consider when members take their benefit.

Further details of the McCloud/Sargeant judgment can be found below in the Regulatory risks section.

Guaranteed Minimum Pension (GMP) indexation and equalisation

On 23 March 2021, the Government published the outcome to its Guaranteed Minimum Pension Indexation consultation, concluding that all public service pension schemes, including the LGPS, will be directed to provide full indexation to members with a GMP reaching State Pension Age (SPA) beyond 5 April 2021. This is a permanent extension of the existing 'interim solution' that has applied to members with a GMP reaching SPA on or after 6 April 2016. Details of the consultation outcome can be found [here](#).

The 2022 valuation approach for GMP is that the Fund will pay limited increases for members that have reached SPA by 6 April 2016, with the government providing the remainder of the inflationary increase. For members that reach SPA after this date, the Fund will be required to pay the entire inflationary increase.

Deficit Recovery/Surplus Amortisation Periods

Whilst one of the funding objectives is to build up sufficient assets to meet the cost of benefits as they accrue, it is recognised that at any particular point in time, the value of the accumulated assets will be different from the value of accrued liabilities, depending on how the actual experience of the Fund differs from the actuarial assumptions. Accordingly, the Fund will normally either be in surplus or in deficit.

Where the actuarial valuation reveals a deficit in respect to a particular employer then the levels of required employer contributions will include an adjustment to fund the deficit over a specified period. Each employer's recovery period is considered individually, unless they are part of a pool (see Pooling of Individual Employers). Past service deficit contributions are generally paid as monetary amounts but may be paid as a percentage of payroll, subject to the Administering Authority agreeing this approach. The maximum deficit recovery period is 18 years.

Where an employer's funding position has improved in the inter-valuation period, but the employer is still in deficit, the employer may be required to maintain the previous total contribution level so that the expected deficit recovery period reduces.

Incremental phasing-in (stepping) of contribution increases may be considered for some employer types where proposed increases are large, with target rates to be achieved in no more than 3 years. Where stepping is agreed to, employers are instructed that the difference between the employer contributions with stepping and the employer contributions without stepping will need to be repaid later in the recovery period.

Employers in surplus on their funding method will generally pay the future service rate although the surplus may be released back to the employer through an adjustment to their contribution rate. The Fund Actuary will consider each employer separately when deciding whether surplus amortisation is appropriate.

The deficit recovery period or amortisation period that is adopted for any particular employer will depend on:

- The significance of the surplus or deficit relative to that employer's liabilities;
- The covenant of the individual employer (including any security in place) and any limited period of participation in the Fund;
- The remaining contract length of the employer in the Fund (if applicable); and
- The implications in terms of stability of future levels of employers' contribution.

Pooling of Individual Employers

The general policy of the Fund is that each individual employer should be responsible for the costs of providing pensions for its own employees who participate in the Fund. Accordingly, contribution rates are set for individual employers to reflect their own particular circumstances.

However, certain groups of individual employers are pooled for the purposes of determining contribution rates to recognise common characteristics or where the number of Scheme members is small.

The main purpose of pooling is to produce more stable employer contribution levels in the longer term whilst recognising that ultimately there will be some level of cross-subsidy of pension cost amongst pooled employers.

Currently, other than Scheme employers that are already legally connected, there are the following pools:

- Small Scheduled Bodies pool
- Grouped Admission Bodies pool
- Fund Academies pool

Forming/disbanding a funding pool

Where the Fund identifies a group of employers with similar characteristics and potential merits for pooling, it is possible to form a pool for these employers. Advice will be sought from the Fund Actuary to consider the appropriateness and practicalities of forming the funding pool.

Conversely, the Fund may consider it no longer appropriate to pool a group of employers. This could be due to divergence of previously similar characteristics or an employer becoming a dominant party in the pool (such that the results of the pool are largely driven by that dominant employer). Where this scenario arises, advice will be sought from the Fund Actuary.

Funding pools should be monitored on a regular basis, at least at each actuarial valuation, in order to ensure the pooling arrangement remains appropriate

Contribution payments

Employers pay contributions on a monthly basis. Primary contributions are certified as a percentage of payroll and therefore amounts paid by employers each month will fluctuate in line with payroll each month. Secondary contributions can be certified as a percentage of payroll or as a monetary amount. Monetary amounts are payable in 12 equal monthly instalments throughout the relevant year.

Employers must pay contributions in line with the Rates and Adjustments Certificate but they may be able to alter the timing of contributions payable and/or pay in additional contributions with agreement from the administering authority. The administering authority has agreed to allow a discount to employers who pay their deficit contributions up front, as long as the payment is received by the end of April in a particular Scheme year (i.e. the discount for the 2023/24 contributions would only apply if the lump sum payment was made by 30 April 2023). Employers must discuss with and gain agreement from the administering authority before making up front payments at the discounted rate.

New employers joining the Fund

When a new employer joins the Fund, the Fund Actuary is required to set the contribution rates payable by the new employer and allocate a share of Fund assets to the new employer as appropriate. The most common types of new employers joining the Fund are admission bodies and new academies. These are considered in more detail below.

Admission bodies

New admission bodies in the Fund are commonly a result of a transfer of staff from an existing employer in the Fund to another body (for example as part of a transfer of services from a council or academy to an external provider under Schedule 2 Part 3 of the Regulations). Typically these transfers will be for a limited period (the contract length), over which the new admission body employer is required to pay contributions into the Fund in respect of the transferred members.

Funding at start of contract

Generally, when a new admission body joins the Fund, they will become responsible for all the pensions risk associated with the benefits accrued by transferring members and the benefits to be accrued over the contract length. This is known as a full risk transfer. In these cases, it may be appropriate that the new admission body is allocated a share of Fund assets equal to the value of the benefits transferred, i.e. the new admission body starts off on a fully funded basis. This is calculated on the relevant funding basis and the opening position may be different when calculated on an alternative basis (e.g. on an accounting basis).

However, there may be special arrangements made as part of the contract such that a full risk transfer approach is not adopted. In these cases, the initial assets allocated to the new admission body will reflect the level of risk transferred and may therefore not be on a fully funded basis or may not reflect the full value of the benefits attributable to the transferring members.

Contribution rate

The contribution rate may be set on an open or a closed basis. Where the funding at the start of the contract is on a fully funded basis then the contribution rate will represent the primary rate only; where there is a deficit allocated to the new admission body then the contribution rate will also incorporate a secondary rate with the aim of recovering the deficit over an appropriate recovery period.

Depending on the details of the arrangement, for example if any risk sharing arrangements are in place, then additional adjustments may be made to determine the contribution rate payable by the new admission body. The approach in these cases will be bespoke to the individual arrangement.

Security

To mitigate the risk to the Fund that a new admission body will not be able to meet its obligations to the Fund in the future, the new admission body may be required to put in place a bond in accordance with Schedule 2 Part 3 of the Regulations, if required by the letting authority and administering authority.

If, for any reason, it is not desirable for a new admission body to enter into a bond, the new admission body may provide an alternative guarantee in a form satisfactory to the administering authority.

New academies

When a school converts to academy status, the new academy (or the sponsoring multi-academy trust) becomes a Scheme employer in its own right.

Funding at start

On conversion to academy status, the new academy will be allocated assets based on the active cover of the relevant local authority at the conversion date, subject to a cap of 100%. The active cover approach is based on the funding level of the local authority's active liabilities, after fully funding the local authority's deferred and pensioner liabilities.

Any deficit is transferred to the Academy pool and the new academy will become part of the Academy pool and will be allocated assets based on the funding level of the pool at the conversion date.

Contribution rate

The contribution rate payable when a new academy joins the Fund will be in line with the contribution rate certified for the Academy pool at the 2022 valuation.

Town and Parish councils

Funding at start

On joining the Fund, the new employer will become responsible for all the pensions risk associated with the benefits accrued by transferring members and all future benefits to be accrued. The employer is allocated a share of Fund assets equal to the value of the benefits transferred, The new employer will become part of the Small Scheduled bodies pool and therefore assets will be re-allocated based on the funding level of the pool at the conversion date.

Contribution rate

The contribution rate payable when a new employer joins the Fund will be in line with the contribution rate certified for the Small Scheduled bodies pool at the 2022 valuation. Where an existing employer in the pool no longer has any active members, a contribution rate will continue to be certified such that the employer may re-join at a later date.

Contribution reviews between actuarial valuations

It is anticipated for most Scheme employers that the contribution rates certified at the formal actuarial valuation will remain payable for the period of the rates and adjustments certificate. However, there may be circumstances where a review of the contribution rates payable by an employer (or a group of employers) under Regulation 64A is deemed appropriate by the administering authority.

A contribution review may be requested by an employer or be required by the administering authority. The review may only take place if one of the following conditions are met:

- (i) it appears likely to the administering authority that the amount of the liabilities arising or likely to arise has changed significantly since the last valuation;
- (ii) it appears likely to the administering authority that there has been a significant change in the ability of the Scheme employer or employers to meet the obligations of employers in the Scheme; or
- (iii) a Scheme employer or employers have requested a review of Scheme employer contributions and have undertaken to meet the costs of that review. A request under this condition can only be made if there has been a significant change in the liabilities arising or likely to arise and/or there has been a significant change in the ability of the Scheme employer to meet its obligations to the Fund.

Guidance on the administering authority's approach considering the appropriateness of a review and the process in which a review will be conducted is set out the Fund's separate Contribution review policy which can be accessed at **Appendix A**. This includes details of the process that should be followed where an employer would like to request a review.

Once a review of contribution rates has been agreed, unless the impact of amending the contribution rates is deemed immaterial by the Fund Actuary, then the results of the review will be applied with effect from the agreed review date, regardless of the direction of change in the contribution rates.

Note that where a Scheme employer seems likely to exit the Fund before the next actuarial valuation then the administering authority can exercise its powers under Regulation 64(4) to carry out a review of contributions with a view to providing that assets attributable to the Scheme employer are equivalent to the exit payment that will be due from the Scheme employer. These cases do not fall under the separate contribution review policy.

With the exception of any cases falling under Regulation 64(4), the administering authority will not accept a request for a review of contributions where the effective date is within 12 months of the next rates and adjustments certificate.

Cessation Valuations

When a Scheme employer exits the Fund and becomes an exiting employer, as required under the Regulations the Fund Actuary will be asked to carry out an actuarial valuation in order to determine the liabilities in respect of the benefits held by the exiting employer's current and former employees. The Fund Actuary is also required to determine the exit payment due from the exiting employer to the Fund or the exit credit payable from the Fund to the exiting employer.

Any deficit in the Fund in respect of the exiting employer will be due to the Fund as a single lump sum payment, unless it is agreed by the administering authority and the other parties involved that an alternative approach is permissible. For example:

- It is agreed with the administering authority that the exit payment can be spread over some agreed period;
- the assets and liabilities relating to the employer will transfer within the Fund to another participating employer; or
- the employer's exit is deferred subject to agreement with the administering authority, for example if it intends to offer Scheme membership to a new employee within the following three years.

Further details are given below.

Managing exit payments

Where a cessation valuation reveals a deficit and an exit payment is due, the expectation is that the employer settles this debt immediately through a single cash payment. However, should it not be possible for the employer to settle this amount, providing the employer puts forward sufficient supporting evidence to the administering authority, the administering authority may agree a deferred debt agreement (DDA) with the employer under Regulation 64(7A) or a debt spreading agreement (DSA) under Regulation 64B.

Under a DDA, the exiting employer becomes a deferred employer in the Fund (i.e. they remain as a Scheme employer but with no active members) and remains responsible for paying the secondary rate of contributions to fund their deficit. The secondary rate of contributions will be reviewed at each actuarial valuation until the termination of the agreement.

Under a DSA, the cessation debt is crystallised and spread over a period deemed reasonable by the administering authority having regard to the views of the Fund Actuary.

Whilst a DSA involves crystallising the cessation debt and the employer's only obligation is to settle this set amount, in a DDA the employer remains in the Fund as a Scheme employer and is exposed to the same risks (unless agreed otherwise with the administering authority) as active employers in the Fund (e.g. investment, interest rate, inflation, longevity and regulatory risks) meaning that the deficit will change over time.

Guidance on the administering authority's policy for entering into, monitoring and terminating a DDA or DSA is set out in the Fund's separate DSA and DDA policies document (**Appendix B**). This includes details of when a DDA or a DSA may be permitted and the information required from the employer when putting forward a request for a DDA or DSA.

Similarly, any surplus in the Fund in respect of the exiting employer may be treated differently to an exit credit, subject to the agreement between the relevant parties and any legal documentation.

In assessing the financial position on termination, the Fund Actuary may adopt a discount rate and adopt different assumptions from those used at the previous funding valuation in order to protect the other employers in the Fund from having to fund any future deficits which may arise from the liabilities that will remain in the Fund.

For example, if there is no guarantor in the Fund willing to accept responsibility for the residual liabilities of the exiting employer, then those liabilities are likely to be assessed on a "minimum risk" basis leading to a higher exit payment being required from (or lower exit credit being paid to) the employer, in order to extinguish their liabilities to the Fund and to reduce the risk of these liabilities needing to be met by other participating employers in future.

The cessation valuation of the liabilities attempts to ensure there are sufficient assets to meet all the liabilities over time. In the event that the assets of a ceased employer are insufficient to meet all the employer's residual liabilities then these liabilities will fall to the ceding employer who originally awarded the contract.

Exit credits

The Local Government Pension Scheme (LGPS) (Amendment) Regulations 2018 were introduced in May 2018 which allow administering authorities to make an exit credit payment to exiting employers. These regulations enable administering authorities to determine at their absolute discretion the amount of any exit credit payment due having regard to the following relevant considerations:-

- The extent to which the employer's assets are in excess of its liabilities
- The proportion of the excess of assets which has arisen because of the value of the employer's contributions
- Any representations made by the exiting employer and its letting authority/guarantor
- Any other relevant factors.

Nottinghamshire County Council Pension Fund's approach aims to protect the interests of the members and employers as a whole and will apply the following approach to the payment of exit credits.

The extent to which the employer's assets are in excess of its liabilities

The Fund's Actuary will calculate the assets and liabilities relevant to the exiting employer. The approach will depend on the specific details surrounding the employer's cessation scenario. Further details of the most likely approach are given in the section "Cessation Valuations".

The proportion of the excess of assets which has arisen because of the value of employer's contributions

Exit credits will only be paid to employers who can demonstrate that they have been exposed to underfunding risk during their participation. The level of risk that an employer has borne will be taken into account. For example, if an employer participated in the Fund on a pass-through arrangement then no exit payment would have been requested if a deficit existed, and therefore it is not appropriate to pay an exit credit if there is a surplus.

On the other hand, if an employer commenced fully funded and was liable for any deficits arising as a result of adverse experience (for example, investment returns less than anticipated) then this employer has borne risk and so an exit debt or credit would be payable on exit.

Any exit payment will be limited to the total contributions paid over the period of participation into the Fund.

Any representations made by the exiting employer and its letting authority/guarantor and any other relevant factors.

Under the Regulations, the administering authority has the discretion to take into account any other relevant factors in the calculation of any exit credit payable and will seek legal advice where appropriate.

The administering authority will pay out any exit credits within six months of the cessation date where possible. A longer time may be agreed between the administering authority and the exiting employer where necessary. If the employer does not provide all the relevant information to the administering authority within one month of the cessation date the administering authority will not be able to guarantee payment within six months of the cessation date.

Bulk transfers

Bulk transfers of staff into or out of the Fund can take place from other LGPS Funds or non-LGPS Funds. In either case, the Fund Actuary for both Funds will be required to negotiate the terms for the bulk transfer – specifically the terms by which the value of assets to be paid from one Fund to the other is calculated.

The agreement will be specific to the situation surrounding each bulk transfer but in general the Fund will look to receive the bulk transfer on no less than a fully funded transfer (i.e. the assets paid from the ceding Fund are sufficient to cover the value of the liabilities on the agreed basis).

A bulk transfer may be required by an issued Direction Order. This is generally in relation to an employer merger, where all the assets and liabilities attributable to the transferring employer in its original Fund are transferred to the receiving Fund.

Consolidation of Multi Academy Trusts (MATs)

Where an academy is transferring into or out of the Fund as part of a MAT consolidation exercise, the Fund generally expects that this will proceed through a Direction Order from the Secretary of State. In these situations and subject to the terms agreed between the Fund Actuary to both LGPS Funds, typically all the assets attributable to the academy in the ceding Fund are transferred to the receiving Fund.

The Fund's preference would be for any transfer to include all members, including deferred and pensioner members. Should a situation arise where an academy is transferring out of the Fund and only active members are transferring, the Fund would seek to retain a level of assets to be at least sufficient to fully fund any deferred and pensioner members left behind, as measured by the Fund's ongoing funding basis at the transfer date.

Where the academy is transferring into the Fund, where appropriate, the academy will become part of the Fund's Academy pool. However, the Fund would not accept a transfer in which would lead to a deterioration in its overall funding level, and in particular as a minimum receive a transfer amount that was no less than the equivalent individual CETVs for the transferring members, based on Government Actuary factors in force at the transfer date. The agreed basis of transfer could take into account the funding basis of the Fund and a top up payment could be made to ensure the Fund would not be significantly worse off or be subject to an unacceptable level of risk.

Links to Investment Policy

The investment strategy and the funding strategy are linked by the strategic asset allocation of the Fund, which has been set following advice from the Fund's investment advisor and with regard, amongst other considerations, the maturity profile of the Fund.

The actuarial valuation involves a projection of future cashflows from the Fund and these cashflows are discounted to the current time, using the discount rate, to obtain a single figure for the value of the past service liabilities. This figure is the amount of money, which if invested now, would be sufficient to make those payments in future provided that the assumptions made during the valuation were borne out in practice (in particular, if the future investment return was equal to the discount rate used).

The discount rate is based on the expected long-term future investment return, using the long-term strategic allocation set out in the Investment Strategy Statement, with a deduction for expenses and for prudence. This ensures consistency between the funding strategy and investment strategy.

Risks and Counter Measures

Whilst the funding strategy attempts to satisfy the funding objectives of ensuring sufficient assets to meet pension liabilities and stable levels of employer contributions, it is recognised that there are risks that may impact on the funding strategy and hence the ability of the strategy to meet the funding objectives.

The major risks to the funding strategy are financial, although there are other external factors including demographic risks, regulatory risks and governance risks.

Financial Risks

The main financial risk is that the actual investment strategy fails to produce the expected rate of investment return (in real terms) that underlies the funding strategy. This could be due to a number of factors, including market returns being less than expected and/or the fund managers who are employed to implement the chosen investment strategy failing to achieve their performance targets.

The valuation results are most sensitive to the real discount rate. Broadly speaking an increase/decrease of 0.1% per annum in the real discount rate will decrease/increase the valuation of the liabilities by 2%, and decrease/increase the required employer contribution by around 0.7% of payroll p.a.

However, the Nottinghamshire County Council Pension Fund Committee regularly monitors the investment returns achieved by the fund managers and receives advice from officers and independent advisers on investment strategy.

The Committee may also seek advice from the Fund Actuary on valuation related matters. In addition, the Fund Actuary may provide funding updates between valuations to check whether the funding strategy continues to meet the funding objectives.

Demographic Risks

Allowance is made in the funding strategy via the actuarial assumptions for a continuing improvement in life expectancy. However, the main demographic risk to the funding strategy is that it might underestimate the continuing improvement in longevity. For example, an increase of one year to life expectancy of all members in the Fund will reduce the funding level by approximately 4%.

The actual mortality of pensioners in the Fund is monitored by the Fund Actuary at each actuarial valuation and assumptions are kept under review. The Fund commissioned a bespoke longevity analysis by Barnett Waddingham's specialist longevity team in order to assess the mortality experience of the Fund and help set an appropriate mortality assumption for funding purposes as part of the 2022 funding valuation.

The liabilities of the Fund can also increase by more than has been planned as a result of early retirements and ill-health retirements. However, the Administering Authority monitors the incidence of early retirements and procedures are in place that require individual employers to pay additional amounts into the Fund to meet any additional costs arising from early retirements.

Climate risk

There are a large number of interlinked systemic long-term financial risks related to climate change which could potentially have a material impact on the assets and/or the liabilities of the Fund. The most obvious of these climate change risks will be the financial risks to the value of the Fund's assets, the potential increased volatility of markets and potential changes in life expectancy. It is possible that some of these factors will impact the assets and liabilities of the Fund in the same direction, although not necessarily by the same amount.

The Fund therefore has a fiduciary duty to consider climate change risk when making investment decisions and to ensure any decisions support the effective management of climate change. The Fund therefore expects their appointed investment managers to be informed about climate change risks and take investment opportunities accordingly within their processes. More detail is included in the Fund's Investment Strategy Statement.

As part of the 2022 valuation, the Fund Actuary provided the Fund with a climate risk analysis which assessed the potential exposure of the Fund's funding position to climate risk under different climate scenarios. The principles behind the analysis were agreed with the Government Actuary's Department (GAD).

The results of this analysis demonstrated that the funding strategy agreed as part of the 2022 valuation was sufficiently robust in the context of climate scenario analysis and any potential contribution impacts.

The Fund will continue to assess this risk on a regular basis.

Maturity risk

The maturity of a Fund (or of an employer in the Fund) is an assessment of how close on average the members are to retirement (or already retired). The more mature the Fund or employer, the greater proportion of its membership that is near or in retirement. For a mature Fund or employer, the time available to generate investment returns is shorter and therefore the level of maturity needs to be considered as part of setting funding and investment strategies.

The cashflow profile of the Fund needs to be considered alongside the level of maturity: as a Fund matures, the ratio of active to pensioner members falls, meaning the ratio of contributions being paid into the Fund to the benefits being paid out of the Fund also falls. This therefore increases the risk of the Fund having to sell assets in order to meet its benefit payments.

The government has published a consultation (*Local government pension scheme: changes to the local valuation cycle and management of employer risk*) which may affect the Fund's exposure to maturity risk. More information on this can be found in the '**Consultation: Local government pension scheme: changes to the local valuation cycle and management of employer risk**' section below.

Regulatory Risks

The benefits provided by the Scheme and employee contribution levels are set out in Regulations determined by central Government. Regulations also place certain limitations on how the assets can be invested. The tax status of the invested assets is also determined by the Government.

The funding strategy is therefore exposed to the risks of changes in the Regulations governing the Scheme and changes to the tax regime which may affect the cost to individual employers participating in the Scheme.

However, the Administering Authority participates in any consultation process of any proposed changes in Regulations and seeks advice from the Fund Actuary on the financial implications of any proposed changes.

There are a number of general risks to the Fund and the LGPS, including:

- If the LGPS was to be discontinued in its current form it is not known what would happen to members' benefits.
- The potential effects of GMP equalisation between males and females, if implemented, are not yet known.
- More generally, as a statutory scheme the benefits provided by the LGPS or the structure of the scheme could be changed by the government.
- The State Pension Age is due to be reviewed by the government in the next few years.

At the time of preparing this FSS, specific regulatory risks of particular interest to the LGPS are in relation to the McCloud/Sargeant judgements, the cost cap mechanism and the timing of future funding valuations consultation. These are discussed in the sections below.

McCloud/Sargeant judgments

The Court of Appeal judgment on the McCloud and Sargeant cases, relate to age discrimination against the age-based transitional provisions put into place when the new judicial pension arrangements were introduced in 2015. The members argued that these transitional provisions were directly discriminatory on grounds of age and indirectly discriminatory on grounds of sex and race, based on the correlation between these two factors reflected in the judicial membership. The Tribunal ruled against the Government, deeming the transitional provisions as not a proportionate means of achieving a legitimate aim.

The Government subsequently applied to the Supreme Court to appeal the judgment but their application was denied on 27 June 2019. On 16 July 2020, the Government published a consultation on the proposed remedy to be applied to LGPS benefits in response to the McCloud and Sargeant cases. A ministerial statement in response to this was published on 13 May 2021 and revised Regulations have brought the remedy into play.

At the time of drafting this FSS, Regulations and therefore confirmation of the remedy are not yet finalised and are expected in 2023.

Cost control mechanism

As a result of the public service pension schemes reforms, the Government established a cost control mechanism for all those schemes to ensure a fair balance of risks between scheme members and the taxpayer. The process has been complex and has still not been fully resolved. Although the 2016 cost cap valuation report for the LGPS has been published, at the time of writing there is still a challenge outstanding regarding the inclusion of McCloud in the cost cap. Therefore, there is still a possibility that the 2016 valuation may have to be revisited with the small chance that benefit improvements will be required and potentially backdated to April 2019.

For the purposes of the 2022 valuation, we have made no allowance for any potential benefit changes. The Fund's prudence allowance already allows for an element of regulatory uncertainty and any potential impact is not deemed to be material.

Consultation: Local government pension scheme: changes to the local valuation cycle and management of employer risk

On 8 May 2019, the government published a consultation seeking views on policy proposals to amend the rules of the LGPS in England and Wales. The consultation covered:

- amendments to the local fund valuations from the current three year (triennial) to a four year (quadrennial) cycle;
- a number of measures aimed at mitigating the risks of moving from a triennial to a quadrennial cycle;
- proposals for flexibility on exit payments;
- proposals for further policy changes to exit credits; and
- proposals for changes to the employers required to offer LGPS membership.

The consultation is currently ongoing: the consultation was closed to responses on 31 July 2019 and an outcome is now awaited. So far, two partial responses to the consultation have been issued:

- On 27 February 2020, a partial response was issued relating to policy changes to exit credits
- On 26 August 2020, a partial response was issued relating to review of employer contributions and flexibility on exit payments

This FSS has been updated in light of these responses and will be revisited again once the outcomes are known for the remaining items.

Detail of the outstanding policy proposals are outlined below:

Timing of future actuarial valuations

LGPS valuations currently take place on a triennial basis which results in employer contributions being reviewed every three years. In September 2018 it was announced by the Chief Secretary to HMT, Elizabeth Truss, that the national Scheme valuation would take place on a quadrennial basis (i.e. every four years) along with the other public sector pension schemes. The results of the national Scheme valuation are used to test the cost control cap mechanism and HMT believed that all public sector scheme should have the cost cap test happen at the same time with the next quadrennial valuation in 2020 and then 2024.

Changes to employers required to offer LGPS membership

At the time of drafting this FSS, under the current Regulations, further education corporations, sixth form college corporations and higher education corporations in England and Wales are required to offer membership of the LGPS to their non-teaching staff.

With consideration of the nature of the LGPS and the changes in nature of the further education and higher education sectors, the government has proposed to remove the requirement for further education corporations, sixth form college corporations and higher education corporations in England to offer new employees access to the LGPS. This could impact on the level of maturity of the Fund and the cashflow profile. For example, increased risk of contribution income being insufficient to meet benefit outgo, if not in the short term then in the long term as the payroll in respect of these types of employers decreases with fewer and fewer active members participating in the Fund.

This also brings an increased risk to the Fund in relation to these employers becoming exiting employers in the Fund. Should they decide not to admit new members to the Fund, the active membership attributable to the employers will gradually reduce to zero, triggering an exit under the Regulations and a potential significant exit

payment. This has the associated risk of the employer not being able to meet the exit payment and thus the exit payment falling to the other employers in the Fund.

There are relatively few employers of this type currently participating in the Fund and so the risks are considered relatively low at present.

Employer Risks

Many different employers participate in the Fund. Accordingly, it is recognised that a number of employer-specific events could impact on the funding strategy including:

- Structural changes in an individual employer's membership
- An individual employer deciding to close the Scheme to new employees
- An employer ceasing to exist without having fully funded their pension liabilities.

The Administering Authority monitors the position of employers participating in the Fund, particularly those which may be susceptible to the events outlined and takes advice from the Fund Actuary when required. In the case of admitted bodies, the Fund has a policy of requiring some form of security from the employer, in the form of a guarantee or a bond, in case of employer default where the risk falls to the Fund. Where the risk of default falls on the liabilities of an original letting authority, the Fund provides advice to the letting authority to enable them to make a decision on whether a guarantee, some other form of security or a bond should be required.

In addition, the Administering Authority keeps in close touch with all individual employers participating in the Fund to ensure that, as Administering Authority, it has the most up to date information available on individual employer situations. It also keeps individual employers briefed on funding and related issues.

Monitoring and Review

This FSS is reviewed formally, in consultation with the key parties as appropriate, at least every three years to tie in with the triennial actuarial valuation process.

The most recent valuation was carried out as at 31 March 2022, certifying the contribution rates payable by each employer in the Fund for the period from 1 April 2023 to 31 March 2026.

The timing of the next funding valuation is due to be confirmed as part of the government's *Local government pension scheme: changes to the local valuation cycle and management of employer risk* consultation which closed on 31 July 2019. At the time of drafting this FSS, it is anticipated that the next funding valuation will be due as at 31 March 2025.

The Administering Authority also monitors the financial position of the Fund between actuarial valuations and may review the FSS more frequently if necessary.
